

Network Meter [Mac/Win]

Download

Network Meter Crack With Key For PC [Updated]

Network Meter Product Key is a gadget for your desktop that shows network traffic and other related data, such as IP address and firewall status. It primarily caters to network administrators and other power users. The tool records traffic as soon as it is initialized, and shows a graphical representation of sent and received packets, along with their amount and speed. You can view your internal and external IP address, blacklisted IP ratio, together with firewall and profile statuses. Plus, you can click two links to perform an online speed test, and to look up your IP details, respectively. A wide range of customization options are available through the Options panel, allowing you to select the network type, network interface scan rate, along with the time interval for saving chart data (to a JS file with a listed path). Furthermore, you can personalize parameters when it comes to the frame size and display for the network interface name, internal and external IP, blacklisted IP ratio, speed test and IP lookup, and others, aside from picking colors for the background, title, alert icon, and the rest of the frame elements. Network Meter Torrent Download is light on the system resources and has a fair response time. It displays accurate information and runs smoothly, without causing the OS to hang, crash or show error notifications. All in all, Network Meter Free Download proves to be a reliable tool for any advanced user. What's New In?

Network Meter is a program for monitoring network traffic. With this application, you can view the traffic information and easily find the source of network problems. Features:

- Set the network interface scan rate (to 3, 6 or 12 seconds).
- Save the traffic data into a text file, or into a.js javascript format file (for more detailed information, see Options).
- You can view your internal and external IP address.
- View blacklisted IPs.
- View the profile status of the firewall.
- View other information about the IP of a website.
- Check the current status of your network interfaces.
- Check the current status of your ethernet card.
- Check the speed of your network interfaces.
- Check the IP address of the host (if your computer is not connected to the internet).
- You can view the history of the traffic with the previous 1-10 days.
- You can check the speed of the network interfaces for the last 1-10 days.
- View a graphic representation of the history of the traffic.
- View the history of the traffic in the previous 1-10 days.
- View the speed of the traffic.
- View the history of the traffic in the previous 1-10 days.
- View the speed of the traffic.
- View the history of the traffic in the previous 1-10 days.
- View the IP address of the host.
- View the current status of the firewall.
- You can set a blacklisted IP, a specific IP address, and a range of IP addresses.
- Change the appearance of the application (background, title,...).
- Change the color of the application (background, title,...).
- Change the color of the alert icon.
- Add or remove the title.
- Add or remove the alert icon.
- Add or remove the 3D frame.
- Add or remove the alert icon.
- Add or remove the options.
- Add or remove the icons.
- Show the IP address.
- Show the computer name.
- Show the IP address of the host.
- Show the computer name.
- Show
