What's New in the SolarWinds IpMonitor?

ipMonitor is an availability monitoring solution built around a powerful, yet easy to use and use, Web-based interface. Not only that, it's also a server monitoring solution that doesn't require any specialized hardware to install and maintain. ipMonitor is a supercharged watchdog that can send out an email or text message if your servers, network devices, or applications go down. The software provides a detailed report on which server or device went down, where it went down, when it went down, and what caused it to go down. It can even be configured to report out to your mobile device, like a text message, if your computer loses power. Not only is ipMonitor supercharged, it's also affordable. You get the most advanced features for just one low price. Try ipMonitor for 30 days, and if you don't like it, you're not out any money! The software is made to be fast and easy to use. Just one simple, but powerful, click of a button, and ipMonitor will monitor all of your network, servers, and applications and give you immediate updates. And with a built-in database and Web server, you don't need to install anything but ipMonitor to monitor your servers, network devices, and applications. With more than 50 customizable notifications, you can choose what types of notifications you want, from getting a simple email message when servers go down, to receiving an SMS text message when servers go down. Plus, the built-in notification setting menu allows you to set which devices you want to monitor for a specific number of minutes, or how long it will take for a notification to be sent. ipMonitor also offers Web-based monitoring. This means that you can monitor any network, servers, and applications, from any PC or Mac that's connected to the Internet. Plus, you can use it in any environment: on-premises or cloud, on any operating system, including Mac OS X, Windows 7/8, and Windows Server 2008 and 2012. SolarWinds ipMonitor is the leading monitoring solution for small to medium-sized businesses. Get real-time updates to monitor all of your network, servers, and applications from anywhere in the world. Try it free for 30 days, and if you don't like it, you're not out any money! *Starting prices for new license holders only. Please contact us to discuss upgrade pricing. ipMonitor is a monitoring solution for small to medium-sized businesses. ipMonitor provides an easy-to-use, Web-based interface that allows users to monitor devices and applications in real-time from any computer connected to the Internet. Using this easy-to-use, yet powerful, software means you can save money on the hardware and hardware maintenance. As a web-based solution, ipMonitor is the perfect solution for businesses that are looking for a low-cost,
